## Accessing Early Learning and Childcare for Children with Complex Health Needs

# What is your experience?

We are carrying out research to inform improved access to and provision of early learning and childcare for children with complex additional support needs due to a severe and/or low incidence condition that may be life-limiting or life-threatening.

This research is supported by Scottish Government.

This is an opportunity for parents to share their views and experiences. You can join one of our focus groups and/ or fill in the short questionnaire.

**We want to hear your lived experience.** We are particularly interested in hearing from parents who have relatively recent experience, i.e. where their child is currently under 8 years.

### Fill in our short questionnaire
