

Innovative Approaches Therapeutic

Our innovative projects are designed to integrate evidence-based best practice in personalised learning, therapy and care programmes to maximise the wellbeing and outcomes of children with neurological conditions.

Innowalk

A robotic dynamic standing device that allows young people with physical disabilities to move and be active.

AMI

Using the Anatomical Measuring Instrument allows us to reduce the risk of fixed deformities through effective measurement of body symmetry and provision of personalised 24-hour postural management

Mollii Suit

A full body garment that delivers electrical stimulation to reduce muscle spasticity throughout the body.
